LONG WEARING TRACTION

The all-new 504C is the latest in all-position durability for on- and off-road severe service operations. The H load-rated 504C represents an upgrade in durability and wet/dry traction. Its superior casing protection and a wider tread profile assure a long lasting original life and enhanced retreadability.

Funnel-Shaped Step Grooves
Promote stone ejection and reduces tread stone damage.

Circumferential Grooves
Three circumferential grooves with a deep center groove allow for better water evacuation throughout the original tread life.

Wide Tread
Provides a more stable footprint for long original tread life, better traction, excellent wet braking and easier retreadability.

High Strength Belt Construction
Protects against rust and stone penetration while minimizing heat generation.

Cut and Chip Resistant Compound
An advanced compound supplies cut and chip resistance without sacrificing wear performance.

Yokohama tires are subject to an ongoing development process. Yokohama Tire Canada reserves the right to change product specifications at any time without notice or obligation.
